UNIDO Brussels Focus

The European Green Deal

Europe’s new growth strategy
A climate-neutral EU by 2050

SEPTEMBER 2020

Executive Summary

The European Green Deal was presented and launched by the European Commission in December 2019. It is Europe’s new growth strategy and it aims to transform the EU into a fair and prosperous society, with a modern, resource-efficient and competitive economy. It aims for no net emissions of greenhouse gases by 2050 and for economic growth to be decoupled from resource use.

The European Green Deal is an integral part of the Commission’s strategy to implement the United Nation’s 2030 Agenda and the Sustainable Development Goals. It is designed to protect, conserve and enhance the EU’s natural capital, and protect the health and well-being of citizens from environment-related risks and impacts. It resets the Commission’s commitment to tackle climate and environmental-related challenges, which the world must cope with today and in the future, including global warming, loss of biodiversity, and pollution.

Moreover, the Green Deal is enshrined in the new EU’s strategy that aims to put the EU at the forefront of coordinating international efforts towards building a coherent financial system that supports sustainable, just and inclusive solutions.

In the light of the COVID-19 pandemic, the Green Deal is at the center of attention, as it is seen by many as a first strong step to put Europe firmly on a new path of sustainable and inclusive growth.

This report aims to explain and synthesize the key policies and measures of the action roadmap initially presented by the European Commission. It is structured as follows: first, the report focuses on the 8 policy areas of the Green Deal, with specific actions within each area. As seen in the roadmap below, some of these have been published already, while others will follow in the coming months and years. In this report, we will develop the actions that are most relevant for UNIDO. Then, the report will focus on the three action mechanisms: the European Climate Pact, the European Climate Law and the Just Transition Mechanism. Finally, it will examine the redesigning of the Green Deal by the different European actors in the light of the COVID-19 pandemic.

The information used in this report mainly comes from the Communication from the Commission to the European Parliament, the European Council, the Council, the European Economic and Social committee and the Committee of the Regions. 1. Introduction

The Green Deal aims to transform the European Union into a modern, resource-efficient and competitive economy. It is the roadmap for making the EU’s economy sustainable. With this strategy, the EU aims to:

1. Become climate-neutral by 2050
2. Protect human life, animals and plants, by cutting pollution
3. Help companies become world leaders in clean products and technologies
4. Help ensure a just and inclusive transition

“The European Green Deal is our new growth strategy – for a growth that gives back more than it takes away. It shows how to transform our way of living and working, of producing and consuming so that we live healthier and make our businesses innovative.”

Ursula von der Leyen,
President of the European Commission

“There is a need to rethink policies for clean energy supply across the economy, industry, production and consumption, large-scale infrastructure, transport, food and agriculture, construction, taxation and social benefits. (...) This is where transformational change is most needed and potentially most beneficial for the EU economy, society and natural environment. The EU should also promote and invest in the necessary digital transformation and tools as these are essential enablers of the changes”. ³

While all of these areas for action are strongly interlinked and mutually reinforcing, careful attention will have to be paid when there are potential trade-offs between economic, environmental and social objectives.

The Green Deal will make consistent use of all policy levers: regulation and standardization, investment and innovation, national reforms, dialogue with social partners and international cooperation.

The Green Deal is an integral part of the European Commission’s strategy to implement the United Nation’s 2030 Agenda and the Sustainable Development Goals.⁴

---

³ The European Green Deal (n2)
⁴ Ibid.
2. The Green Deal at the core of EU's recovery plan

The coronavirus pandemic has caused a temporary drop in worldwide greenhouse gas emissions. Thanks to the lockdowns, a reduction of the travel and the traffic occurred, the production processes were disrupted and people consumed less. As a consequence, some Member States might achieve the climate goals this year, in line with the 2030 climate targets. However, the EU still needs to invest in its long-term future in order to achieve its objective of becoming climate-neutral in 2050.

Therefore, the EU has decided to put the Green Deal at the core of its recovery plan, as Europe's growth strategy. In order to unleash its full potential, it is essential that the Commission's new recovery instrument, Next Generation EU, drives Europe's competitive sustainability. Every public investments in the recovery should thus follow the green oath to 'do no harm', and long-term certainty and predictability need to be ensured to unlock private investments. This underlines the importance of the Climate Law and the future proposals to set more ambitious emissions reduction targets for 2030, the adoption of which might however be delayed due to the coronavirus crisis.

The money raised for Next Generation EU will thus be channelled through EU programmes in the revamped long-term EU budget, including the European Green Deal, and more specifically in:

- A massive renovation wave of our buildings and infrastructure and a more circular economy, bringing local jobs;
- Rolling out renewable energy projects, especially wind, solar and kick-starting a clean hydrogen economy in Europe;
- Cleaner transport and logistics, including the installation of one million charging points for electric vehicles and a boost for rail travel and clean mobility in our cities and regions;
- Strengthening the Just Transition Fund to support re-skilling, helping businesses create new economic opportunities.

---

3. Policy Areas of the Green Deal

The European Green Deal includes a European Climate Law, a European Climate Pact, and a new global strategy in international relations. In addition, it is divided in 8 policy areas.

The 8 policy areas are:

1. Increasing the EU’s climate ambition for 2030 and 2050
2. Supplying clean, affordable and secure energy
3. Mobilising industry for a clean and circular economy
4. Building and renovating in an energy and resource efficient way
5. Accelerating the shift to sustainable and smart mobility
6. From ‘Farm to Fork’: designing a fair, healthy and environmentally-friendly food system
7. Preserving and restoring ecosystems and biodiversity
8. A zero pollution ambition for a toxic-free environment

The policy areas above include different concrete strategies, action plans, laws, etc. As seen in the roadmap below, some of these have been published already, while others will follow in the coming months and years. In this report, we will explain the actions that are most relevant for UNIDO.

</tr>
<tr>
<td>New EU Strategy on Adaptation to Climate Change</td>
<td>2020/2021</td>
</tr>
</tbody>
</table>

The EU will present an impact assessed plan to update the EU’s climate ambition for 2030 with a cut of at least 50-55% in the greenhouse gas (GHG) emissions compared with 1990 levels. It will present a new package proposing to revise, when necessary, all relevant climate-related policy instruments. This will include the Emissions Trading Directive⁹ and the Effort Sharing Regulation¹⁰, as well as the LULUCF directive¹¹, dealing with land use change.

The EU also wants to ensure effective carbon pricing throughout the economy, so that it is aligned with climate objectives. It will, among other measures, propose to revise the Energy Taxation Directive.¹² It will also present a carbon border adjustment mechanism, for selected sectors, to reduce the risk of carbon leakage and ensure that the price of imports reflects more accurately their carbon content.

---

¹⁰ Regulation (EU) 2018/842 on binding annual greenhouse gas emission reductions by Member States from 2021 to 2030 contributing to climate action to meet commitments under the Paris Agreement and amending Regulation (EU) No 525/2013.

¹¹ Regulation (EU) 2018/841 on the inclusion of greenhouse gas emissions and removals from land use, land use change and forestry in the 2030 climate and energy framework, and amending Regulation (EU) No 525/2013 and Decision No 529/2013/EU.

### 3.2 Clean, affordable and secure energy

</tr>
</tbody>
</table>

The production and use of energy account for more than 75% of the EU’s greenhouse gas emissions. In addition, 17.5% of the EU’s gross final energy consumption came from renewable sources in 2017.

### CLEAN ENERGY STRATEGY

<table>
<thead>
<tr>
<th>Decarbonizing the EU’s energy system. 3 Key principles:</th>
<th>Key drivers for new proposals to increase the EU’s climate ambition for 2030</th>
</tr>
</thead>
</table>
| Prioritize energy efficiency and develop a power sector based largely on renewable sources | - Develop the full potential of Europe’s offshore wind energy.  
- Interconnect energy systems and better link/integrate renewable energy sources to the grid.  
- Boost energy efficiency and eco-design of products. |
| Secure and affordable EU energy supply                   | - Decarbonize the gas sector and promote smart integration across sectors.  
- Empower consumers and help Member States tackle energy poverty. |
| Fully integrated, interconnected and digitalized EU energy market | - Promote innovative technologies and modern infrastructure.  
- Increase cross-border and regional cooperation to better share.  
- Promote EU energy standards and technologies at global level. |

<td></td>
</tr>
</tbody>
</table>

The new Industrial Strategy was designed to help deliver on three key priorities\(^{15}\): (1) maintaining European industry’s global competitiveness and a level playing field at home and globally; (2) making Europe climate-neutral by 2050; and (3) shaping Europe’s digital future.

This new Industrial Strategy includes:

- An Intellectual Property Action Plan\(^{16}\) to uphold technological sovereignty, promote global level playing field, better fight intellectual property theft and adapt the legal framework to the green and digital transitions.

- The review of EU competition rules to ensure the EU rules are fit for purpose for an economy that is changing fast.

- The adoption of a White Paper to address distortive effects caused by foreign subsidies in the single market and tackle foreign access to EU public procurement and EU funding\(^{17}\). The issue related to foreign subsidies will be addressed in a proposal for a legal instrument in 2021. This is meant to go hand in hand with the ongoing work in the Commission to strengthen global rules on industrial subsidies in the WTO, and actions to address the lack of reciprocal access for public procurement in third countries.

---

\(^{15}\) https://ec.europa.eu/commission/presscorner/detail/en/ip_20_416
\(^{16}\) https://ec.europa.eu/info/law/better-regulation/have-your-say/initiatives/12510-Intellectual-Property-Action-Plan
\(^{17}\) https://ec.europa.eu/commission/presscorner/detail/en/ip_20_1070
Comprehensive measures to modernise and decarbonise energy-intensive industries, support sustainable and smart mobility industries, to promote energy efficiency, strengthen current carbon leakage tools and secure a sufficient and constant supply of low-carbon energy at competitive prices.

Enhance Europe’s industrial and strategic autonomy by securing the supply of critical raw materials through an Action Plan on Critical Raw Materials and pharmaceuticals based on a new EU Pharmaceutical Strategy and by supporting the development of strategic digital infrastructures and key enabling technologies.

A Clean Hydrogen Alliance to accelerate the decarbonisation of industry and maintain industrial leadership, followed by Alliances on Low-Carbon Industries and on Industrial Clouds and Platforms and raw materials.

Further legislation and guidance on green public procurement.

A new Circular Economy Action Plan aims to modernize EU’s economy. It presents new initiatives along the entire life cycle of products in order to modernize and transform the European economy while protecting the environment. It aims to change the methods of consumption and the way of production.

---

3.4 Building and renovating in an energy and resource efficient way

<table>
<thead>
<tr>
<th>Roadmap</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>‘Renovation wave’ initiative for the building sector</td>
<td>2020</td>
</tr>
</tbody>
</table>

The built environment remains a strategic research and innovation domain in view of the goal of full decarbonisation by 2050. The priority is the design and construction of new or retrofitting of existing buildings as zero-emission/zero-pollution, positive energy powerhouses within sustainable green neighbourhoods. For that purpose, the EU and the Member States aim to engage in a ‘renovation wave’ of public and private buildings.

**‘Renovation wave’ of public and private buildings.** While increasing renovation rates is a challenge, renovation lowers energy bills, and can reduce energy poverty. It can also boost the construction sector and is an opportunity to support SMEs and local jobs.

**Enforce the legislation related to the energy performance of buildings.** This will include an assessment of Member States’ national long-term renovation strategies. The EU will also work on the possibility of including emissions from buildings in European emissions trading. And it aims to review the Construction Products Regulation to ensure a design that is in line with the needs of the circular economy, and lead to increased digitalisation and climate-proofing of the building stock.

**New initiative on renovation in 2020**. The Commission will launch an open platform bringing together the buildings and construction sector, architects and engineers and local authorities to develop innovative financing possibilities, promote energy efficiency investments in buildings, and pool renovation efforts into large blocks to benefit from economies of scale.

---

3.5 Sustainable and smart mobility

<table>
<thead>
<tr>
<th>Roadmap</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Strategy for sustainable and smart mobility</td>
<td>2020</td>
</tr>
<tr>
<td>Funding call to support the deployment of public recharging and refueling points as part of alternative fuel infrastructure</td>
<td>From 2020</td>
</tr>
<tr>
<td>Assessment of legislative options to boost the production and supply of sustainable alternative fuels for the different transport modes</td>
<td>From 2020</td>
</tr>
<tr>
<td>Revised proposal for a Directive on Combined Transport</td>
<td>2021</td>
</tr>
<tr>
<td>Initiatives to increase and better manage the capacity of railways and inland waterways</td>
<td>From 2021</td>
</tr>
<tr>
<td>Proposal for more stringent air pollutant emissions standards for combustion-engine vehicles</td>
<td>2021</td>
</tr>
</tbody>
</table>

Transport accounts for a quarter of the EU’s greenhouse gas emissions and these continue to grow. The Green Deal seeks a 90% reduction in these emissions by 2050\(^{24}\). The below table showcases the diverse policy actions to reach the five principal targets that structure the Sustainable Mobility policy area.

<table>
<thead>
<tr>
<th>5 KEY TARGETS</th>
<th>ACTIONS PROPOSED BY THE EUROPEAN COMMISSION</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. GO DIGITAL</td>
<td>• Automated mobility and smart traffic management systems to make transport more efficient and cleaner. () • Smart applications and ‘Mobility as a Service’ solutions to be developed</td>
</tr>
<tr>
<td>2. USE DIFFERENT MODES OF TRANSPORT</td>
<td>• More freight should be transported by rail or water. () • The Single European Sky is meant to help cutting air transport emissions at zero cost for consumers and companies.</td>
</tr>
<tr>
<td>3. PRICES THAT REFLECT IMPACT ON ENVIRONMENT</td>
<td>• Ending subsidies for fossil-fuel. () • Extending emissions trading to the maritime sector. () • Effective road pricing in the EU. () • Reducing free allowances to airlines under emissions trading.</td>
</tr>
<tr>
<td>4. BOOST SUPPLY OF SUSTAINABLE ALTERNATIVE TRANSPORT FUELS</td>
<td>• By 2025, about 1 million public recharging and refueling stations will be needed for the 13 million zero- and low-emission vehicles expected on European roads.</td>
</tr>
<tr>
<td>5. REDUCE POLLUTION</td>
<td>• Implement stricter standards on pollution by cars. () • Reduce pollution in EU ports. () • Improve air quality near airports.</td>
</tr>
</tbody>
</table>

<tr>
<td>‘Farm to Fork’ Strategy. Measures, including legislative, to significantly reduce the use and risk of chemical pesticides, as well as the use of fertilizers and antibiotics</td>
<td>Spring 2020 and 2021</td>
</tr>
</tbody>
</table>

A legislative framework for strengthening the sustainability of food systems

To accelerate and facilitate the transition to sustainable food systems, the Commission will make a legislative proposal before the end of 2023. This framework will promote policy coherence at EU and national level, mainstream sustainability in all food-related policies and strengthen the resilience of food systems. It will also be designed to allow operators to benefit from sustainable practices and progressively raise sustainability standards to become the norm for all food products placed on the EU market.

Farm to Fork diagram

26 https://ec.europa.eu/food/farm2fork_en
An Action Plan for the market for organic food\textsuperscript{27}

The Commission will put forward an Action Plan on organic farming. This plan will be designed to help Member States stimulate both supply and demand for organic products. It will ensure consumer trust and boost demand through promotion campaigns and green public procurement. This plan will help to reach the objective of at least 25% of the EU’s agricultural land under organic farming by 2030 and a significant increase in organic aquaculture.

A new network for Agricultural Knowledge\textsuperscript{28}

The Commission will propose legislation to convert its Farm Accountancy Data Network into the Farm Sustainability Data Network with a view to also collect data on the Farm to Fork and Biodiversity Strategies’ targets and other sustainability indicators. The network will enable the benchmarking of farm performance against regional, national or sectoral averages. Through tailored advisory services, it will provide feedback and guidance to farmers and link their experience to the European Innovation Partnership and research projects. This will improve the sustainability of participating farmers, including their incomes.

<table>

3.7 Preserving and protecting biodiversity

**Roadmap**

<table>
<thead>
<tr>
<th>Roadmap</th>
<th>Date</th>
</tr>
</thead>
<tbody>
<tr>
<td>EU Biodiversity Strategy for 2030</td>
<td>March 2020</td>
</tr>
<tr>
<td>Measures to address the main drivers of biodiversity loss</td>
<td>From 2021</td>
</tr>
<tr>
<td>New EU Forest Strategy</td>
<td>2020</td>
</tr>
<tr>
<td>Measures to support deforestation-free value chains</td>
<td>From 2020</td>
</tr>
</tbody>
</table>

**EU Biodiversity Strategy** has the following objectives:

- Establish protected areas for at least 30% of land and 30% of sea in Europe.
- Restore degraded ecosystems at land and sea. Increasing organic farming, halting, and reversing the decline of pollinators, restoring at least 25 000 km of EU rivers to a free-flowing state, reducing the use and risk of pesticides by 50% by 2030 and planting 3 billion trees by 2030.
- Unlock 20 billion euros per year for biodiversity through EU funds and national and private funding.
- Put the EU in a leading position in the world in addressing the global biodiversity crisis. Project of a new UN Global Biodiversity Framework at the Conference of the Parties (COP) to the Convention on Biological Diversity in 2021.

**A post-2020 global framework new strategy.** The EU plans to adopt a transformative post-2020 global framework at the 15th Conference of the Parties to the Convention on Biological Diversity (postponed). This new framework will aim to address the five main drivers of biodiversity loss, set out an enhanced governance framework to fill remaining gaps and ensure the full implementation of EU legislation.

**EU Nature Restoration Plan** is meant to help improve the health of existing and new protected areas, and to bring diverse and resilient nature back to all landscapes and ecosystems. It will also mean supporting the recovery of nature, limiting soil sealing and urban sprawl, and tackling pollution and invasive alien species. The plan is expected to create jobs, reconcile economic activities with nature growth and help ensure the long-term productivity and value of the natural capital.

3.8 A zero-pollution ambition for a toxic free environment

<table>
<thead>
<tr>
<th>Roadmap</th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Chemicals strategy for sustainability</strong></td>
<td>Summer 2020</td>
<td></td>
</tr>
<tr>
<td><strong>Revision of measures to address pollution from large industrial installations</strong></td>
<td>2021</td>
<td></td>
</tr>
<tr>
<td><strong>Zero pollution action plan for water, air and soil</strong></td>
<td>2021</td>
<td></td>
</tr>
</tbody>
</table>

**1 The Chemical Strategy for Sustainability**

- Help to protect citizens and the environment better against hazardous chemicals and encourage innovation for the development of safe and sustainable alternatives.
- Combine better health protection with increased global competitiveness.
- Improve rules on assessment of substances launched on the market.

**2 Revision of measures to address pollution from large industrial installations**

- Reduce pollution from large industrial installations.
- Improve prevention of industrial accidents.

**3 The zero-pollution action plan for water, air and soil**

**Overall objective:**
To protect EU citizens and ecosystems, the Commission wants to better monitor, prevent, and remedy pollution whether it comes from the air, water or the soil.

**Clean water:**
- Preserve biodiversity in lakes, rivers, and wetlands.
- Reduce pollution from excess nutrients thanks to the Farm to Fork strategy.
- Reduce particularly harmful pollution from micro-plastics and pharmaceuticals.

**Clean air:**
- Review air quality standards in line with the World Health Organization guidelines.
  Provide support to local authorities to achieve cleaner air for EU citizens.

The Green Deal is an integral part of the Commission’s strategy to implement the United Nations 2030 Agenda and the Sustainable Development Goals (SDGs). As part of the Green Deal, the Commission will refocus the European Semester process of macroeconomic coordination to integrate the SDGs, to put sustainability and the well-being of citizens at the center of economic policy, and the sustainable development goals at the heart of the EU’s policymaking and action.

The EU recognizes that the global challenges of climate change and environmental degradation require a global response. It wants to lead the example and will try to promote and implement environmental, climate and energy policies across the world, mobilizing all its diplomatic bilateral and multilateral channels, including the United Nations, the World Trade Organization, the G7 and G20. Moreover, the EU has committed to ensure that the Paris Agreement remains a fundamental multilateral framework for the fight against climate change.

---

32 The European Green Deal (n2)
33 Ibid
In parallel, the EU will step up bilateral engagement with partner countries, especially the economies of the G20, which are responsible for 80% of global greenhouse gas emissions. The EU is also working with global partners to develop international carbon markets as a tool to create economic incentives for climate action.\textsuperscript{34}

While it will put emphasis on supporting its immediate neighbours, the EU will also reinforce its partnership with China and will use its diplomatic and financial tools to ensure that green alliances are part of its relations with Africa and other partner countries and regions, particularly in Latin America, the Caribbean, Asia and the Pacific. The EU will try to engage with third countries on cross-cutting climate and environment issues.\textsuperscript{35}

The EU is also relying on\textit{ trade policy} as a support for the ecological transition. It will propose to make the respect of the Paris agreement an essential element for all future comprehensive trade agreements. Moreover, all chemicals, materials, food and other products that are placed on the European market must fully comply with relevant EU regulations and standards. As the world’s largest single market, it also has the capacity to set standards for sustainable growth that apply across global value chains.\textsuperscript{36}

Concerning\textit{ international cooperation} and the partnership policy, the EU is committing to help channel both public and private funds to achieve the transition. This includes\textsuperscript{16} organized\textsuperscript{16} private finance. The European Commission proposal for a Neighbourhood, Development and International Cooperation Instrument (NDICI) proposes to allocate a target of 25% of its budget to climate-related objectives. Finally, the EU will also continue its efforts to set up a financial system that supports global sustainable growth.\textsuperscript{37}

<tr>
<td>Proposal for an 8th Environmental Action Program</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

As part of the European Green Deal, the European Commission launched on the 4th of March 2020 a public consultation on the future European Climate Pact, which is a broad initiative to give everyone a voice and space to design new climate actions, share information, launch grassroots activities and showcase solutions that others can follow.\(^{38}\) Indeed, the transition to a climate-neutral society concerns first and foremost the life of EU citizens.

Alongside government policies and regulation, citizens, communities and organisations in all sectors of our society and economy have their part to play, which is why citizens are and should remain a driving force of the transition.\(^{39}\)

The European Climate Pact, deemed to be adopted in the course of the fourth quarter of 2020, aims to inform, inspire, and foster cooperation between people and organizations ranging from national, regional and local authorities to businesses, unions, civil society organizations, educational institutions, research and innovation organizations, consumer groups and individuals. It is meant to be a broad initiative for citizens and stakeholders to design new climate and environmental actions, share information and showcase solutions.\(^{40}\)

The European Climate Pact will encourage broad societal engagement on climate and environment through a range of activities.\(^{41}\)

---

\(^{39}\) The European Green Deal (n2)

\(^{41}\) Ibid
1. Communication activities and events
The Pact will raise awareness and build understanding of the global climate change on the basis of reliable scientific evidence to inspire people and organisations to become involved and adopt sustainable behaviours.

2. Triggering action among people and organisations
The Commission will encourage people and organisations by promoting pledges and supporting relevant initiatives with knowledge and capacity building in order to boost their impact and inspire further action across Europe and globally.

3. Working together
Opportunities for communication, learning and networking will be provided by the Commission to help bring people together in order to share ideas and experience. For example, direct citizen consultations could be organized as well as citizen assemblies.
6. A European Climate Law

“The Climate Law is the legal translation of our political commitment, and sets us irreversibly on the path to a more sustainable future. It is the heart of the European Green Deal. It offers predictability and transparency for European industry and investors. And it gives direction to our green growth strategy and guarantees that the transition will be gradual and fair.”

Ursula von der Leyen, President of the European Commission

On 4 March 2020, the European Commission adopted a legislative proposal for a European Climate Law.42

The European Climate Law aims to write into law the goal set out in the European Green Deal for Europe’s economy and society to become climate-neutral by 2050. The Law aims to ensure that all EU policies contribute to this goal and that all sectors of the economy and society play their part.

With this Law, the EU institutions and the Member States are bound to take the necessary measures at EU and national level to meet the target. It includes measures to keep track of progress and adjust EU institutions and member states actions accordingly, based on existing systems such as the governance process for Member states’ National Energy and Climate Plans, regular reports by the European Environment Agency, and the latest scientific evidence on climate change and its impact.43

---

**Measures for achieving climate neutrality**

According to the proposal, by September 2020, the Commission should review the existing 2030 emissions targets set out in Regulation (EU) 2018/1999 in light of the 2050 climate-neutrality objective, as well as propose a new 2030 emissions-reduction target of 50 to 55% and amend the relevant law.

By June 2021, the Commission would be required to evaluate and, where necessary, revise all relevant EU legislation implementing the 2030 target in light of the new target reduction.

The Commission proposes the adoption of a 2030-2050 EU-wide trajectory for greenhouse gas emission reductions, to measure progress and give predictability to public authorities, businesses and citizens.

**Assessment of EU and National Measures**

Under the proposal, by September 2023 and every five years thereafter, the Commission would access the collective progress made by the Member States on climate neutrality and adaptation strategies. The Commission would also be required to review the consistency and adequacy of the EU measures on climate neutrality and adaptation strategies under the same timeline.

**Next steps**

The legislative proposal for this European Climate Law was submitted to the European Parliament, the Council, the Economic and Social Committee and the Committee of the Regions for further consideration under the ordinary legislative procedure.

7. The Just Transition Mechanism

Making Sure No One is Left Behind

On 14 January 2020, the European Commission presented the European Green Deal’s Just Transition Mechanism (JTM), as part of the Sustainable Europe Investment Plan.

In order to ensure that no one is left behind in the green transition and in order to move away from fossil fuels like coal, lignite, peat and oil shale, this Mechanism is meant to provide tailored financial and practical support to help workers and generate the necessary investments in regions most affected by the transition. More specifically, it will make investments more attractive, with an overall financial package worth at least EUR 150 billion over the period 2021-2027, focusing on the regions, industries and workers who will face the greatest challenges. The JTM will support the transition through various means:

Financial support

1. A new Just Transition Fund of EUR 10 billion primarily in the form of grants. According to the Commission, the funding will be used to alleviate the socio-economic impacts of the green transition in the regions most affected, by for example supporting the re-skilling of workers, helping SMEs to create new economic opportunities, and overall diversifying economic activity, investing in the future of the most affected regions.

2. InvestEU “Just Transition” scheme mobilising EUR 30 billion in investments. A portion of financing under InvestEU will be used to achieve the just transition objectives. InvestEU will not only support investment in projects in just transition territories (regions having an approved transition plan under the Just Transition Fund rules), but also in other regions, provided that they benefit the just transition territories.

---

50 After having been brought from EUR 7.5 to 40 billion by the Commission’s proposal for a recovery plan, the European Council decided to lower the total amount to EUR 10 billions see European Council (2020) Special meeting of the European Council (17, 18, 19, 20 and 21 July 2020) - Conclusions [Online] https://www.consilium.europa.eu/media/45109/210720-euco-final-conclusions-en.pdf

52 This was the amount at the time of the EU’s proposal for a recovery plan. This number will have to be adapted as the European Council has recently cut off the financing under InvestEU to 5.6 billion see European Council (n46)

53 European Commission (2020) Just Transition funding sources [Online]
Similarly, InvestEU will support investments in a wider range of projects compared to the Just Transition Fund, such as projects for energy and transport infrastructure, including gas infrastructure and district heating, but also decarbonisation projects, economic diversification and social infrastructure. The final use of InvestEU will remain demand-driven and will depend on the project pipeline and the capacity of the regions concerned.\textsuperscript{54}

3. **A new public sector loan facility leveraged by the European Investment Bank (EIB) of EUR 10 billion in loans, backed by EUR 1.5 billion in grants from the EU budget.**

This facility will mobilise up to EUR 25-30 billion and aims to provide public sector entities with resources to implement measures to facilitate the transition to climate neutrality. Supported investments will range from energy and transport infrastructure, district heating networks, energy efficiency measures including renovation of buildings, as well as social infrastructure.\textsuperscript{55}

It must be noted that, while the JTF will provide funding primarily in the form of grants, the two other financing streams planned as part of the Just Transition Mechanism (InvestEU scheme and EIB public sector loan facility) will leverage public and private investment by backing investment projects of financial partners such as the EIB.\textsuperscript{56}

**Technical assistance via a Just Transition Platform to advise and support**

The Just Transition Platform aims to assist EU countries and regions to unlock the support available through the JTM. This platform will provide a single access point for support and knowledge related to the just transition. All the relevant knowledge and information that authorities and beneficiaries need will be shared on the platform, including funding opportunities, relevant regulatory updates or sector specific initiatives.\textsuperscript{57}

In particular, the platform will offer technical and advisory support to stakeholders involved in activities related to the JTM. The Platform will build on and expand the work of the existing Initiative for Coal Regions in Transition, which already supports fossil fuel producing regions across the EU in achieving a just transition through tailored, needs-oriented assistance and capacity-building.\textsuperscript{58}

**Transition plans for beneficiary regions to steer the investments**

**Attractive conditions and risk sharing for public and private investors**

## Annex: Roadmap of Actions

### Policy areas

1. **Increasing the EU’s climate ambition for 2030 and 2050**
   - Proposal on a European ‘Climate Law’ enshrining the 2050 climate neutrality objective: March 2020
   - Comprehensive plan to increase the EU 2030 climate target to at least 50% and towards 55% in a responsible way: Summer 2020
   - Proposals for revisions of relevant legislative measures to deliver on the increased climate ambition, following the review of Emissions Trading System Directive; Effort Sharing Regulation; Land use, land use change and forestry Regulation; Energy Efficiency Directive; Renewable Energy Directive; CO₂ emissions performance standards for cars and vans: June 2021
   - Proposal for a revision of the Energy Taxation Directive: June 2021
   - Proposal for a carbon border adjustment mechanism for selected sectors: 2020/2021
   - New EU Strategy on Adaptation to Climate Change: 2020/2021

2. **Supplying clean, affordable and secure energy**
   - Assessment of the final National Energy and Climate Plans: June 2020
   - Strategy for smart sector integration: 2020
   - Evaluation and review of the Trans-European Network Energy Regulation: 2020
   - Strategy on offshore wind: 2020

3. **Mobilising industry for a clean and circular economy**
   - EU Industrial strategy: March 2020
   - Circular Economy Action Plan, including a sustainable products initiative and particular focus on resource intense sectors such as textiles, construction, electronics and plastics: March 2020
   - Initiatives to stimulate lead markets for climate neutral and circular products in energy intensive industrial sectors: From 2020
   - Proposal to support zero carbon steel-making processes by 2030: 2020
   - Legislation on batteries in support of the Strategic Action Plan on Batteries and the circular eco: October 2020
   - Propose legislative waste reforms: From 2020

4. **Building and renovating in an energy and resource efficient way**
   - ‘Renovation wave’ initiative for the building sector: 2020

5. **Accelerating the shift to sustainable and smart mobility**
   - Strategy for sustainable and smart mobility: 2020
   - Funding call to support the deployment of public recharging and refuelling points as part of alternative fuel infrastructure: From 2020
   - Assessment of legislative options to boost the production and supply of sustainable alternative fuels for the different transport modes: From 2020
   - Revised proposal for a Directive on Combined Transport: 2021
Initiatives to increase and better manage the capacity of railways and inland waterways | From 2021
---|---
Proposal for more stringent air pollutant emissions standards for combustion engine vehicles | 2021

### 6. ‘Farm to Fork’ Strategy

- Examination of the draft national strategic plans | 2020-2021
- ‘Farm to Fork’ Strategy. Measures, including legislative, to significantly reduce the use and risk of chemical pesticides, as well as the use of fertilizers and antibiotics | Spring 2020 and 2021

### 7. Preserving and restoring ecosystems and biodiversity

- EU Biodiversity Strategy for 2030 | March 2020
- Measures to address the main drivers of biodiversity loss | From 2021
- New EU Forest Strategy | 2020
- Measures to support deforestation-free value chains | From 2020

### 8. A zero-pollution ambition for a toxic free environment

- Chemicals strategy for sustainability | Summer 2020
- Zero pollution action plan for water, air and soil | 2021
- Revision of measures to address pollution from large industrial installations | 2021

### Mainstreaming sustainability in all EU policies

- Proposal for a Just Transition Mechanism, including a Just Transition Fund, and a Sustainable Europe Investment Plan | January 2020
- Renewed sustainable finance strategy | Autumn 2020
- Initiatives to screen and benchmark green budgeting practices of the Member States and of the EU | From 2020
- Review of the relevant State aid guidelines, including the environment and energy State aid guidelines | 2021
- Align all new EC initiatives in line with the objectives of the Green Deal and promote innovation | From 2020
- Stakeholders to identify and remedy incoherent legislation that reduces the effectiveness in delivering the European Green Deal | From 2020
- Integration of the Sustainable Development Goals in the European Semester | From 2020

### The EU as a global leader

- International climate and biodiversity negotiations and the international policy framework | From 2019
- Strengthen the EU’s Green Deal Diplomacy in cooperation with Member States | From 2020
- Bilateral efforts to induce partners to act and to ensure comparability of action and policies | From 2020
- Green Agenda for the Western Balkans | From 2020

### A European Climate Pact

- Launch of the European Climate Pact | March 2020
- Proposal for an 8th Environmental Action Program | 2020
